

DUTCH BIOCOMPOSITES

Is this material the new black?

This biokomposit is a 100% biodegradable blend of cellulose fiber materials and bioplastic. The material can replace wood, metal and plastic plates, and can be used outdoors. It is lighter than aluminum, cheaper than glass fiber and 3 times as strong as hard wood. It can be molded at high heat and used with ordinary tools like saws and drills.

The material has many qualities and we must wait to see if it is going to be a part of future construction.

Biopregs material developed by the Dutch firm Kiem. See more at materia.nl
